

Avoiding the Base to Final Accident

Loss-of-Control in flight is implicated in 51% of all fatal personal and business-use GA accidents, with the majority of these events being aerodynamic stalls. Notably, fatal stalls and spin entries are less common in instructional flights and more likely for licensed pilots when coupled with distractions. Understanding the governing principles of stalls, coordination, spin entry, and angle of attack is paramount to prevention.

Directions: Take I-275 to exit 63B (Eastgate). Go East on S.R. 32 for approximately 3 miles. Follow signs to Clermont County Airport. Seminar held on 2nd floor of the Sporty's Building.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area

Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASTeam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
